

DUSSEHRA HOLIDAY SYSTEM — 20-YEAR DETAILED STRATEGY REPORT

Comprehensive Multi-Factor Performance Study: Nifty 50 Futures Index vs Combined 50 Stocks (2000–2026)

EXECUTIVE SUMMARY & HOLIDAY MANDATE

This quantitative research note presents the 20-year empirical performance audit of the **Dussehra (Vijayadashami) Market Holiday System**. Because the Dussehra calendar date shifts dynamically every year based on the Hindu lunar calendar, entry dates (\$T-N\$) and exit dates (\$T+M\$) are dynamically calculated per year, operating strictly on **open NSE trading sessions (skipping Saturdays, Sundays & market holidays)**. The strategy incorporates a **0.05% futures transaction cost per leg (0.10% total turnover cost)** across all trade logs. System B delivers an empirical win rate of **78.80%**, generating **+Rs. 11,736,517.37 Net Realized Profit**, outperforming System A's index win rate of **65.38%**.

System B Win Rate	78.80%	System A Win Rate	65.38% (18W / 8L)
System B Net Profit	+Rs. 11,736,517.37	System A Net Profit	+Rs. 57,766.33
System B Profit Factor	4.36x	System A Profit Factor	1.63x
System B Return on Capital	304.84% (CAGR: 7.24%)	System A Return on Capital	46.21%

1. Shifting Calendar Date & Trading Day Arithmetic Logic

- 1. Dynamic Calendar Shift (\$T_y\$):** Dussehra is a lunar festival, so its calendar date shifts every year (Oct 20 in 2026, Oct 2 in 2025, Oct 12 in 2024, Oct 24 in 2023). Entry (\$T_y-N\$) and exit (\$T_y+M\$) dates are calculated dynamically per year.
- 2. Trading Day Step Arithmetic:** Trade entries and exits step strictly through open NSE trading sessions, skipping Saturdays, Sundays, and NSE market holidays.
- 3. Transaction Cost & Margin Recycling:** 0.05% entry + 0.05% exit (0.10% total turnover cost) is deducted on all trades. Upon trade exit on \$T+M\$, margin is recycled sequentially.
