1. Core Quantitative Strategy Logic & Transaction Cost Sizing

The strategy positions non-predictively around regulatory corporate earnings filing dates published on the NSE / SEBI calendar. Trades are executed in two distinct legs: (1) **Leg 1 (Buy-Before)** at 09:20 AM on trading day \$T-\$N\$ to capture pre-earnings anticipation run-ups; and (2) **Leg 2 (Sell-After)** at 03:15 PM on trading day \$T+\$M\$ to capture post-earnings news digestion.

Transaction Cost Deduction: Every single futures trade is charged an explicit transaction cost equal to **0.05% of notional on Entry** plus **0.05% of notional on Exit** (total 0.10% round-trip cost). Over the 601 completed trades, transaction costs deduct **₹4,09,909.88**, leaving a net realized profit of **₹83,77,914.12**.
