Win Rate = % of MPC events the stock closed higher over its T-2→T+5 window. Median return is used (robust to outliers). Sharpe is per-event; Max DD is on the chronological event equity curve; PF = gross wins / gross losses.

2. Sector Breakdown (all 50 names)

SECTOR	STOCKS	AVG WIN RATE	AVG MEDIAN RET
Consumer Durables & Retail	2	61.1%	+1.33%
Healthcare & Pharma	5	55.8%	+0.59%
Automobile & Auto Components	6	54.8%	+0.43%
Cement & Construction	3	54.6%	+0.39%
Information Technology	6	54.2%	+0.60%
Metals & Mining	5	53.0%	+0.67%
Banking & Financials	11	52.1%	+0.30%
Telecom & Logistics	2	50.6%	-0.10%
FMCG & Consumption	5	50.4%	+0.12%
Oil, Gas & Energy	5	50.3%	-0.01%

3. How to read this & caveats

Selection: these are the most *consistent* RBI-drift names, but the edge is modest (win rates 56–64%, median +0.5–+2%) and **drawdowns are large at the single-name level (–30% to –82%)** — individual stocks are far more volatile than the index basket. **Best risk-adjusted:** the Healthcare names (APOLLOHOSP, DIVISLAB) carry the highest profit factors (~2.0). **Scenario matters:** as with the index, the edge concentrates on a **rate pause**; going long into a rate cut is weak. Trade these as a diversified basket, size for the drawdowns, and prefer the pause meetings.

Real backtest on Nifty-50 daily closes 2000–2026 · 162 MPC events · split-robust (skip daily moves > ±20%) · gross of costs · historical, not a forward guarantee.
