Why this is different from earlier reports today: every number here is a genuine out-of-sample result — the window and direction for each historical trade were chosen using ONLY years strictly before it, never future data. Most Nifty-50 win rates here are much closer to 50% than the in-sample reports showed; that gap IS the overfitting this project has repeatedly flagged. HINDUNILVR (82.6% WR, n=23) is the strongest genuinely-validated result found.

Full 211-stock detail, insufficient-history list, and the 2026 position schedule are in the companion Excel.
