Caveat: picking the best direction per stock fits its own history closely but has repeatedly underperformed a single uniform index-backed direction out-of-sample in this project's prior testing — treat as historical fit, not a guaranteed forward edge. Rows marked **LOW** confidence have under 3 years of data (some just 1) — a "100% win rate" there is 1-2 data points, not a robust statistic. Full 211-stock year-by-year detail (every stock, every available year) is in the companion Excel (Year_by_Year_Detail sheet); the 16 stocks with zero data are listed on its Insufficient_Data sheet.

Split-robust backtest (corporate-action days excluded) • 55 stocks on 26yr cash history, 140 on up to 7yr F&O futures history • consistent with the live dashboard's Nifty-50 Dussehra positions (0 mismatches verified).
