Definitions: CAGR and Max DD are computed on each stock's own yearly Dussehra-trade equity curve (one trade/year, not a calendar-year price return). Sharpe-like = mean / stdev of yearly returns (not annualized). Rows marked **LOW** confidence have under 3 years of data. **Caveat:** best-direction-per-stock selection fits history closely but has repeatedly underperformed a single uniform index-backed direction out-of-sample in this project's prior testing.

Entry/exit schedule for all 50 (20-Oct-2026 anchor) is in the companion Excel, Position_Schedule_2026 sheet.
